

Stakeholder Exploration Handbook & QA Testing Runbook

A Comprehensive Guide to System Terminology, Architecture, Functional Features, and Step-by-Step Multi-Role Testing Protocols

Document Version: 1.0 (Production Release)	Target Environment: Web & API Staging / Local
Classification: Stakeholder QA & Demo Manual	Platform Line: Intercity Scheduled & Private Hire
Provided Seed Credentials: Super Admin Only	Release Date: Q3 2026

EXECUTIVE TESTING NOTICE: This runbook provides the master **Super Admin** credentials. To experience the platform realistically, stakeholders are guided through self-registering fresh **Passenger**, **Operator**, and **Private Driver** accounts to validate end-to-end user workflows, approval gates, terminal desk operations, and financial settlement cycles.

1. System Architecture & Product Boundaries

JekaGo is an enterprise intercity transport management system tailored for the Nigerian transport ecosystem. The platform eliminates chaotic park queues, enables predictable travel schedules, enforces passenger manifests for safety compliance, and automates financial settlement directly to motor park bank accounts.

The system operates across three distinct operational layers:

- JekaGo Intercity (Scheduled Bus/Car Travel):** Scheduled terminal-to-terminal travel where passengers book specific seats ahead of departure.
- JekaGo Private (Dedicated Intercity Hire):** An on-demand, door-to-door chauffeur service (Driver + Car or Chauffeur Only) using a quote-and-agree model.
- HQ Governance & Park Desk Operations:** Operational consoles for terminal officers (ticketing & scanning), fleet operators (routes & trips), and super administrators (oversight & payouts).

2. System Terminology & Key Concepts

Understanding core platform terms ensures seamless evaluation during testing:

Term	Definition & Operational Context
Intercity Travel	Scheduled interstate journeys running between accredited motor parks/terminals on fixed departure timetables.
JekaGo Private	Door-to-door interstate vehicle hire. Distinct from ride-hailing: drivers provide customized price quotes, and passengers agree on a single upfront fare.

Motor Park / Terminal	Physical transport stations (e.g., Ijora Badiya, Mile 2, Ilorin Central) where trips depart and arrive. Each park has designated bank payout accounts.
Booking Officer	Terminal desk personnel equipped with QR scanners to validate boarding tickets and print physical passenger manifests.
Passenger Manifest	Digital and printable record of all onboard passengers, seat assignments, and Next-of-Kin (NOK) emergency contacts required by safety regulators.
Seat Hold (~12 mins)	Temporary reservation lock when a passenger selects seats during checkout to prevent duplicate bookings across concurrent users.
T-30 Min Settlement	Automated payout batch compiled 30 minutes prior to scheduled trip departure, calculating net park earnings after deducting the platform fee.
Platform Commission	Platform fee model (default: flat ₦1,000 per seat). Included in the total passenger fare and reconciled during park settlement.
Trip-Start OTP	A secure 6-digit PIN generated for Private hires that the passenger gives to the driver upon vehicle arrival to verify departure.

3. System Access Doors & Master Credentials

JekaGo enforces strict role separation across dedicated access doors to prevent unauthorized privilege escalation:

Access Door	Target URL	Permitted Roles	Primary Functionality
Passenger Portal	/login /register	Passenger	Search trips, seat booking, e-ticket view, booking history.
Operator & Staff	/workspace /partner	Operator, Booking Officer	Fleet, routes, trip creation, QR scanning, desk manifests.
Private Chauffeur	/private/login /driver	Private Passenger, Private Driver	Private requests, bidding/offers, trip execution, live GPS.
HQ Governance	/hq or /admin	Super Admin	KYC approvals, commission settings, payout audits.

Master Super Admin Credentials

Role	Super Administrator (HQ)
Portal URL	https://<domain>/hq (or /admin)
Email Address	admin@jekago.com
Password	Admin@123456
Access Scope	Full system oversight, operator approval, fee policy configuration, park payout batches.

4. Step-by-Step QA Testing Protocols

Follow these 6 structured test scenarios in sequence to evaluate the entire system lifecycle:

Protocol 1: Super Admin Governance & Configuration

Objective: Verify system health, fee rules, and administrative monitoring.

Step	Action	Expected Outcome
1.1	Navigate to /hq and sign in with admin@jekago.com.	Access granted to Admin Dashboard (/admin). Core KPI metrics load.
1.2	Open Commission (/admin/fees).	View platform fee rule (Default: Flat ■1,000/seat). Configure custom rules if needed.
1.3	Open Intercity Payouts (/admin/earnings).	Review pending payout batches across motor parks. Settle filters operate cleanly.
1.4	Open Operators (/admin/operators).	Inspect operator listing, verification badges, and document review queues.

Protocol 2: Operator Registration, KYC & Trip Scheduling

Objective: Register a new transport operator, approve via Admin, and create bookable trips.

Step	Action	Expected Outcome
2.1	Open /partner in an incognito window. Click Start Operator Application .	Onboarding form opens requesting Business Name, RC Number, Contact, and Park details.

2.2	Submit form with test details (e.g. <i>Apex Transit Ltd</i>).	Application status marked as 'Pending Review'.
2.3	Switch to Admin window (/admin/operators). Find <i>Apex Transit</i> and click Approve .	Operator status updates to Active with verified badge.
2.4	Sign in as the new operator at /workspace.	Lands on Operator Console (/operator).
2.5	Navigate to Fleet (/operator/fleet) and add a vehicle.	Vehicle registered (e.g., 11-seater Toyota HiAce, Plate: TEST-999-AB).
2.6	Navigate to Routes (/operator/routes) and add Lagos → Ilorin.	Route created with base fare (e.g. ₦12,500).
2.7	Navigate to Trips (/operator/trips) and schedule a departure for today.	Trip published with active seat availability.

Protocol 3: Passenger Search, Interactive Seat Booking & E-Ticketing

Objective: Register a passenger, select seats interactively, pay via Paystack, and generate e-tickets.

Step	Action	Expected Outcome
3.1	Open /register. Register a new passenger account.	Account created; redirected to Passenger Dashboard (/dashboard).
3.2	Navigate to /search. Search origin: Lagos , destination: Ilorin , date: Today .	Available trips list with operator name, vehicle comfort, price, and departure time.
3.3	Select the scheduled trip. Choose specific seats on the interactive bus map.	Seat hold timer starts (~12 min countdown). Fare calculated automatically.
3.4	Enter passenger name and Next-of-Kin (NOK) contact for manifest compliance.	Form validated; proceed to payment summary.
3.5	Proceed to checkout via Paystack Test Gateway.	Payment succeeds; instant redirection to /booking/success/[ref].
3.6	Inspect the generated Digital E-Ticket.	Displays Booking Reference, unique QR Code, departure park address, and check-in window.
3.7	Test Guest Retrieval (/ticket/retrieve).	Entering reference + phone retrieves the ticket without login.

Protocol 4: Park Desk Operations & QR Boarding Verification

Objective: Validate boarding passes at the terminal desk and produce official departure manifests.

Step	Action	Expected Outcome
4.1	Log into /workspace as the Park Booking Officer.	Terminal Officer Console loads (/officer).
4.2	Open Verify Ticket (/officer/verify). Scan or type the passenger booking reference.	Ticket details display: passenger name, seats, status: <i>Confirmed</i> .
4.3	Click Check-In Passenger .	Ticket status transitions to Boarded . Duplicate scan attempts are flagged.
4.4	Open Trip Manifest for the departing vehicle.	Complete list of all boarded passengers, emergency contacts, and assigned seats.
4.5	Click Print Manifest .	Clean, printable hardcopy generated for driver and park safety records.

Protocol 5: JekaGo Private (Chauffeur & Dedicated Vehicle Hire)

Objective: Execute an intercity private request from quote submission to OTP-verified trip completion.

Step	Action	Expected Outcome
5.1	Open /driver/apply. Apply as a Private Driver (Driver + Car or Chauffeur Only).	Upload test driver's licence and vehicle details.
5.2	In Admin window (/admin/private), approve the driver application.	Driver profile activated.
5.3	Sign in as passenger at /private/login. Navigate to /private/app/new.	Submit private request (e.g., Lekki, Lagos → GRA, Ilorin, pickup tomorrow).
5.4	Sign in as driver at /driver. Find the request in Driver Board and submit quote.	Quote submitted (e.g. ₦85,000) with custom driver message.

5.5	In passenger window (/private/app), review incoming offers and click Accept Quote .	Proceed to Paystack checkout. Trip confirmed; 6-digit start PIN issued to passenger.
5.6	In driver window, click Start Trip and input the passenger's 6-digit PIN.	PIN verified; trip status changes to <i>In Transit</i> with live location pings.
5.7	Driver marks trip as Completed upon destination arrival.	Passenger rates driver; driver earning queued for settlement.

Protocol 6: Financial Settlement & Payout Audit

Objective: Validate automated motor park settlement batches and commission reconciliation.

Step	Action	Expected Outcome
6.1	Log into HQ Admin (/admin/earnings). Filter by <i>Pending Payouts</i> .	Batch generated for the completed trip displaying Gross Revenue, Platform Fee (■1,000/seat), and Net Park Payout.
6.2	Verify Park Bank Account metadata (Bank Code, Account Number, Account Name).	Matches the park bank account configured during operator setup.
6.3	Click Export Settlement Sheet (CSV) .	Downloads formatted bank payment batch file for finance audit.
6.4	Log into Operator Console (/operator/earnings).	Operator sees matching transaction ledger, verified payout status, and historical remittance.

5. Stakeholder Evaluation Scorecard

Use this structured scorecard during evaluation sessions to record test outcomes and feedback:

Test Module	Key Assertion / Requirement	Result (P / F)	Stakeholder Notes & Observations
HQ Governance	Super Admin dashboard loads; fee configuration and operator approvals function cleanly.	[]	
Operator Onboarding	New operator can apply at /partner, get approved, add vehicles, and schedule trips.	[]	
Seat Reservation	Interactive seat map displays accurate layouts; seat hold lock countdown prevents double bookings.	[]	
Paystack Checkout	Seamless payment flow; instant issuance of QR e-ticket and booking reference.	[]	
Park Desk Scanner	Booking officer can scan QR code to check in passengers and print hardcopy manifest.	[]	
JekaGo Private	Driver bidding, quote acceptance, 6-digit OTP verification, and trip completion operate end-to-end.	[]	
Park Settlement	T-30 min automated batch compiles accurate ■1,000 platform commission deduction.	[]
